

Committee: General Assembly 2 (English)

Topic: Rebuilding Post-Conflict Economies and Infrastructure in the Age of Resource Scarcity

Head Chair: Yassir Abduhakimov

Co-Chair: Damirbek Xolnazarov and Jihoo Yoon

Introduction

Rebuilding economies post conflict, is getting more complex and more expensive as we speak. Syria's 13-year civil war has been estimated at 216 billion USD (10 times their GDP.) Another case, the war in Ukraine has been estimated by international observers at nearly 600 billion USD. The more countries wait to rebuild their economies, the more expensive rebuilding economies becomes. However, in this day and age another issue arises - the issue of resource scarcity. Post-conflict countries often lack the means of reconstruction, such as water, land, energy. Many countries worldwide lack the resources to rebuild their economies post conflict. The international community must think of a framework of how countries rebuild their economies/infrastructure.

Key Words

Post conflict reconstruction - The process of rebuilding a country after a conflict.

Resource scarcity - A situation in which resources are limited.

Economic reconstruction - The process of rebuilding a country economically.

Infrastructure - Essential facilities such as roads, hospitals, energy infrastructure.

Resource allocation - The process of allocating limited and scarce resources.

General Overview

Following the end of a conflict, restoring a country's economy and infrastructure requires many years, a lot of financial and natural resources. Conflicts destroy critical infrastructure such as roads, hospitals, schools, energy infrastructure, water supplies. In the age of resource scarcity, many post conflict economies face shortages of critical resources that are necessary to rebuild an economy or required infrastructure. International organizations worldwide must develop a framework to deal with these issues during the age of resource scarcity. This lack of resources creates a difficult situation for countries to restart their economies. Therefore, to combat this, the international community must develop an effective framework to rebuild infrastructure and rebuild economies.

Major Parties Involved

United Nations (UN)

World Bank

International Monetary Fund (IMF)

UNDP (United Nations Development Programme)

Donor countries

NGO's

Investors

Timeline of Relevant Events

Year	Event
1945	The United Nations established, which creates a framework for peace and post conflict reconstruction.
1947-1952	Marshall Plan created, supports post conflict reconstruction of Europe following the completion of World War II
1990s	Post conflict reconstruction continues in Bosnia and Rwanda.
2003	The Iraq War begins which creates another obstacle for post conflict reconstruction.

2011	The Syrian Civil War begins and creates massive destruction across Syria.
2022	Russia's invasion of Ukraine causes massive infrastructure destruction that needs years of restoration efforts.

[Iraq's Economic Outlook](#) - analyzes the impact of Iraq's invasion.

[Syria Post-Conflict Reconstruction Costs Estimated at \\$216 billion](#) - Estimates how Syria is affected by the invasion \$216 billion.

Possible Solutions

1. *Create an internationally recognized framework of dealing with post conflict recovery.*
If countries and international communities come together to create a single framework, with rules, procedures, and financial donations to post conflict countries - this would create a single document that all countries follow to support the reconstruction of a post conflict economy.
2. *Support PPPs (Public-Private Partnerships)*
By supporting public private partnerships, we can attract investment into post conflict economies worldwide and mitigate the impacts of conflicts on the economy and infrastructure while using a low amount of resources.
3. *Resource sharing*
Creating a resource sharing agreement or framework, will allow post conflict countries to mutually manage scarce resources such as water, oil, land in order to mitigate the situation with scarce resources in today's world.
